2/3 Jaw Puller Attachment

Use this puller attachment with OEM Slide Hammer kit #27033.

27184

1. For use with center bolt size 5/8" x 18 threads.
2. Make sure Puller is correct size for the job.
3. Position the jaws of the Puller so that they grab the gear or pulley with as much surface area as possible.
4. Now position the Jaw Tension Cone tight against the jaws.
5. Verify that jaws of Puller are attached securely to the gear or pulley and that there is nothing restricting the puller jaws or item to be pulled.
6. Using the slide hammer motion, apply a light side hammer stroke at first and increase to a heavier stroke until the item is removed.

Caution: Always wear safety glasses
